	9923103001	Prasanna Godiyal
9923103003	Ayush Bajpai	
	9923103004	Shivanshi Singh
9923103005	Aarushi Tyagi	

Course Name: SOFTWARE ENGINEERING LAB

Course Code: 15B17CI573

Program: B. Tech. CSE 3nd

Year 6th Semester

2025 – 2026

ABSTRACT

The Educational Resource Sharing Platform is an online platform developed to offer a centralized digital repository for educational resources. The platform allows students and lecturers to upload, view, manage, and share educational resources such as notes, presentations, e-books, and question papers. The platform is intended to address the issue of resource disorganization on various platforms and ensures that educational resources are well-organized, searchable, and secure. The platform also ensures effective knowledge sharing through collaborative learning by using features such as user authentication and role-based access management.

INTRODUCTION

With the rapid development of digital technology, there is a growing trend among educational institutions to move towards online learning environments. However, learning resources are usually dispersed through emails, messaging applications, and personal storage solutions, making it difficult to access and manage them efficiently. The Educational Resource Sharing Platform is a centralized, secure, and organized solution for uploading, searching, downloading, and managing learning resources. It improves collaboration, accessibility, and facilitates continuous learning beyond the classroom.

PROBLEM STATEMENT

Educational resources in institutions are often scattered across multiple platforms such as emails, messaging applications, and personal storage systems, making them difficult to organize and access efficiently. Students face challenges in finding updated and reliable study materials, while teachers lack a centralized system to distribute content effectively. This results in duplication of resources, poor collaboration, and inefficient management of academic materials. Therefore, there is a need for a centralized, secure, and user-friendly platform to manage and share educational resources efficiently.

OBJECTIVE

The objective of this project is to develop a centralized and secure platform for sharing and managing educational resources efficiently. It aims to provide easy access to study materials, enable role-based user management, and promote collaboration among students and teachers. The system also focuses on improving organization, accessibility, and scalability of academic content.

PROPOSED SOLUTION

The proposed system is a web-based Educational Resource Sharing Platform that allows authenticated users (Admin, Teacher, Student) to upload, manage, search, and download academic materials. The platform ensures secure storage, easy retrieval, and organized collection of educational resources while promoting collaborative learning.

IMPLEMENTATION

1. User Authentication and Authorization

- Registration and login system.
- Role-based access (Admin, Teacher, Student).
- Profile management system.

2. Resource Upload and Management

- Upload files (PDF, PPT, DOC, videos, etc.).
- File format validation.

3. Admin Module

- 1 Manage users.
- 2 Approve/remove inappropriate content.
- 3 Maintain system performance.

6. Technology Stack

1. Frontend: (HTML, CSS, JavaScript) /REACT.
2. Backend: Node/PHP.
3. Database: SQL-based database/MongoDB

REQUIREMENT ANALYSIS

• FUNCTIONAL REQUIREMENTS:

- ❖ The system shall allow user registration and login.

- ❖ The system shall allow uploading of educational resources.
- ❖ The system shall validate file formats before upload.
- ❖ The system shall allow users to download resources.
- ❖ The system shall allow Admin to manage users and content.

- NON-FUNCTIONAL REQUIREMENTS:

- ❖ The system shall respond within few seconds.
- ❖ The system shall support multiple concurrent users.
- ❖ The system shall be user-friendly and easy to navigate.
- ❖ The system shall be scalable for future expansion.
- ❖ The system shall follow maintainable architecture.

SDLC MODEL USED

Agile Model

The Agile model is chosen for this project because the system needs to be developed in an iterative manner with continuous improvements and feedback from the users (students and teachers). The Agile model supports incremental development and flexibility in dealing with changing requirements.

The development process will be broken down into several sprints:

- ❖ Sprint 1: Login and basic upload functionality
- ❖ Sprint 2: Search and filtering system
- ❖ Sprint 3: Admin panel and optimization

EXPECTED OUTCOME

The Educational Resource Sharing Platform is expected to:

- Create a centralized academic repository.
- Facilitate easy access to learning resources.
- Promote collaboration among students and faculty members.
- Ensure effective and organized management of resources.

CONCLUSION

The Educational Resource Sharing Platform offers a systematic, secure, and scalable way to efficiently manage academic resources. By integrating academic resources and facilitating collaborative interaction, the platform improves the online learning experience. The application of Agile methodology ensures flexibility and improvement, making the system adaptable to future needs. In general, the project seeks to develop a secure and efficient academic resource management system that meets the needs of modern education.
